

Heavy lifting slings with Dyneema® SK78

Only slings made with Dyneema® SK78 fiber offer the highest performance and reliability powered by DSM's robust engineering tools. From the very first lift onwards, they provide the vital link between cranes and their payloads.

Increasingly large infrastructure and energy projects mean heavier and more complex lifts, tighter turnarounds, and mounting costs. Dyneema® SK78 fiber helps overcome these challenges while meeting the highest regulatory standards, ensuring lifting operations are as quick, safe and smooth as possible.

The benefits of Dyneema® SK78

Assured & trusted solution fully accredited by major certifying bodies

Highest reliability powered by Dyneema® SK78 and robust engineering tools

Sustainable manufacturing with the **lowest carbon footprint**. And, now available as the first bio-based HMPE fiber
